

PRONE POSITION HEADREST WITH MIRROR

For pressure-relieving positioning of patients

- ✓ Single use
- ✓ With mirror
- ✓ Latex and PVC free

**Prone position headrest with mirror**

For pressure-relieving positioning of patients

The ergonomically shaped headrest ensures that patients are placed in a prone position in a safe and pressure relieving manner and that the tracheal tube remains kink-free during surgery. The headrest mirror enables the patient to be monitored by means of the high openings on the side of the headrest.

✓
Patient safety

The individually and hygienically packed (non-sterile) headrest is only intended for single use with adults. This helps prevent cross-contamination.

✓
Accessibility

The patient's head and face as well as the tracheal tube are all easily accessible by means of the openings on the sides.

✓
Patient comfort

The ergonomic headrest made out of rigid PUR foam reduces the pressure on the patient's head and neck.

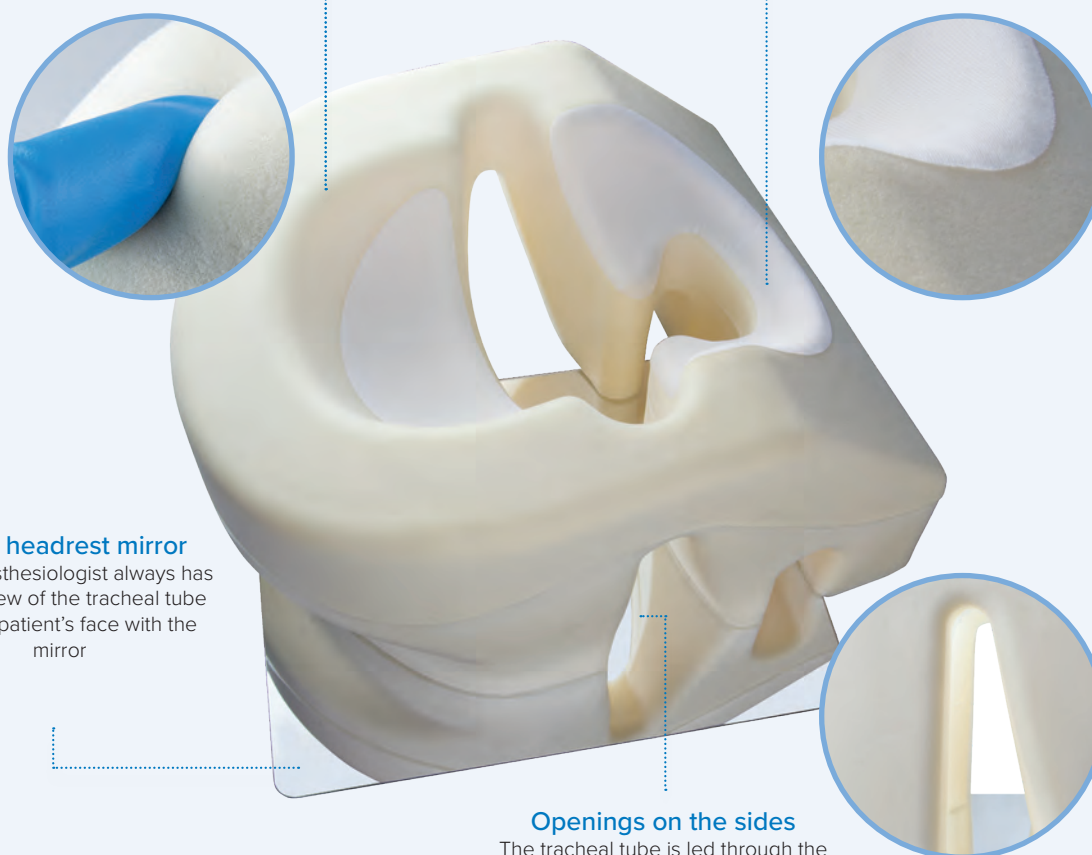

Polyurethane foam
High degree of form stability through the PUR foam

Ergonomic design
Optimal head and neck positioning due to the ergonomic design

Integrated absorbent cloth
There is a skin-friendly absorbent cloth on the areas where the face comes into contact with the headrest

Large headrest mirror
The anaesthesiologist always has a clear view of the tracheal tube and the patient's face with the mirror

Openings on the sides
The tracheal tube is led through the openings on the side without kinks developing

Single-use

**Prone position headrest with mirror**

For pressure-relieving positioning of patients

**Features**

- ☐ Lightweight due to the polyurethane foam (PUR), and at the same time, a high degree of shape stability
- ☐ The ergonomic design assists in stabilising the head without pressure building up, even during long medical surgeries
- ☐ The patient's head and neck are given proper support and the pressure on the patient's face is minimised
- ☐ The openings on the sides make it possible for the endotracheal tube to remain free of kinks
- ☐ Patients can be easily monitored using the headrest mirror, which comes included
- ☐ Prevents infections because it is for single use
- ☐ For use with adults
- ☐ Reuse with the same patient is only possible if the headrest has not been contaminated or damaged during temporary storage
- ☐ Free of latex and PVC
